

advanced materials for Tapes

NEENAH* Coarse Crepe Base Papers

Neenah Paper, Inc. has nearly 50 years of experience in the manufacture of latex-saturated and coated papers used in pressure sensitive tapes. With an established track record for quality, performance and service, we are a preferred choice worldwide for creped tape backings.

NEENAH* Coarse Crepe Base Papers are available for conversion into general purpose masking and specialty tape applications. Our stretch and conformability mean the product you produce will be well suited to follow curves and indentations. Our proprietary chemistry provides products with excellent temperature, water and chemical resistance, allowing your final tape product to better withstand the rigors of all painting applications, including the painting and baking cycle related to the industrial painting/curing process. All of the coarse crepe grades contain synthetic latex and are available with or without release coatings. Our release coatings range from "easy" to "tight" and anywhere in between.

We realize that not all customer needs are the same. If one of our standard grades does not meet your requirements, let us know. Neenah Paper Technical Paper offers an experienced research and development department to design the perfect product for your application.
